Email Availability Service

Uninterrupted access to e-mail in an easy to use, inexpensive solution.

- **Deployment**
 - EAS can be deployed regardless of your current messaging infrastructure in less than a day.
 - Users determine the size of their archive in order to balance cost with continuity
 - Secure solution uses redundant hardware and software powered by SunGard's industry leading availability facilities.
- **Activation**
 - Easy activation in less than 60 seconds following an interruption
 - Users automatically informed of the activation
 - Users securely access their email 24/7 via a web browser using either pass phrases or secure IDs.
 - Key contact information and calendar entries remain available
- **Testing**
 - Test activation for a selected group of users
- **Back to normal**
 - Messages sent or received during the disruption are re-populated to the primary system once it becomes available again.
- **Cost effective email availability in the face of virtually any catastrophic disruption**
- **Automated notification system can ensure users keep their emergency contact information up to date - a key part of the response to any major disaster.**

The first provider of Email Availability Services in the UK.
