Services

In order to support the continuity needs of all organisations, regardless of their size or IT environment, SunGard has invested heavily in a very broad range of solutions. The services described on these pages are the most popular of those solutions, appropriate to the needs of all, but tailored to smaller businesses. To aide understanding, we have divided them into 3 elements:

Be Prepared

If you undertake projects without first planning what you need to achieve it is unlikely you will reach a satisfactory or cost effective solution. The first step in business continuity involves being prepared and developing a plan.

SunGard has developed a range of solutions that will enable you to quickly and cheaply determine what business continuity solution is appropriate to your business.

Be Recovered

Once you have a business continuity plan, you need resources to implement it. These solutions have been selected from our broad range of recovery services on the basis that they are necessary for all businesses; they enable a company to recreate the core components of their business within hours of a disaster.

Be Assured

These solutions are designed to increase the resilience of your business, reducing the likelihood that you will be materially affected by a disaster, or enabling critical applications to be recovered faster.
